The perfect working partner.

Reliable, innovative, durable and seriously spacious, Fiat Ducato draws on twenty-five years of development and experience, making it an ideal partner to drive your business forward. For goods or people, leisure or specialist work, there is an ideal Ducato.

From panel van to dropside truck or people carrier or a base for conversion, each model is available in a number of variations, for every working need.

The van has a choice of wheelbases from 3000 and 4035mm and lengths of between 4963mm and 6363mm. There are 3 exterior lengths that correspond to load bay heights of 1662, 1932 and 2172mm. The Ducato's striking new styling ensures that your hard working partner also looks the part – contemporary and professional.

Vital to the Ducato's new design is the strong, protective wrap-around front bumper. Ingeniously, it is made in three parts, each of which can be replaced separately if damaged in an accident, instantly reducing repair costs. New light clusters are sharp and modern, complimenting the dynamic, compact design of the nose, while the rear is angular and tough looking, with its sturdy bumper merging into the side rubbing strips. This is a vehicle that means business from every angle.

Business Class.

In a busy week you spend more time at the wheel of your business vehicle than in your favourite chair at home. That's why the Ducato's cabin is designed to deliver uncompromised comfort.

It's a relaxing, car-like environment, with a newly positioned steering wheel, dash-mounted gear lever, instantly legible instruments and controls at your fingertips. In the driver's seat you can adjust for length, height and backrest angle, while the whole cabin has been planned to accommodate people of all shapes and sizes for comfortable journeys.

A host of compartments, storage spaces, draws and supportive surfaces mean that you can keep all documents and day-to-day equipment well stowed but within easy reach. Life on board is further enhanced by the optional Blue&Me™ system which allows you to make safe hands-free calls using your Bluetooth mobile phone without a fiddly ear-piece. Created by Fiat in partnership with Microsoft, Blue&Me™ also lets you connect devices such as MP3, WMA and Wave digital music players, so you can enjoy your choice of music through the Ducato's sound system.

Other technology adding to your comfort and convenience available on request includes cruise control and parking sensors, rain sensitive wipers and automatic lighting, plus a rear mounted video camera with in-dash monitor.

The Ducato driver's seat can be adjusted backwards and forwards, with 200mm of travel and 20 separate settings. It's also height adjustable and has a multi-position backrest with lumbar adjustment.

Exceptional transport for extraordinary loads.

Load bay volume

13/ 17 m³

Load capacity

1485/1850 kg

The Ducato range is wide and diverse, making light work of all your transport demands. If you need to go that bit further and carry more, then the Ducato Maxi is your choice. With 16" wheels and gross vehicle weights (GVW) between 3.5 and 4 tonnes, the Ducato Maxi has a load capacity of up to 1850kg and a

load bay volume from 13 to 17m³. These figures say it all if you've got bulky or awkward loads to move. The Ducato Maxi is also available as a dropside truck cab, which gives you a loading surface of up to 8.5m² in the single cab version and 6.8m² in the twin-cab.

Access all areas.

The Ducato takes the strain out of loading with great accessibility. You can choose between one or two sliding doors, with a maximum width of 125cm, while the rear has two full-height doors. When all doors are open, you can get to every last centimetre of space from floor to roof. To make loading even easier, doors open to 90 and 180 degrees, plus you can specify rear doors that open to a full 270 degrees. Packages and pallets that measure more than 2 metres high can be loaded through the rear door with minimal lifting, thanks to the low, 53cm threshold.

The Ducato has a gross vehicle weight (GVW) between 3000 and 3500kg, while the Ducato Maxi ranges from 3500 to 4000kg. The mechanical layout of the Ducato Maxi means that the front axle maximum load is 2100kg and the rear axle figure is 2400kg.

The rear door in the super-high version is over 2 metres high!

Optional second sliding side door.

Available as an option, the removable side door panel makes loading and unloading easier still.

16" wheels on the Ducato Maxi.

An interior width of 142cm between wheel arches is best in class.

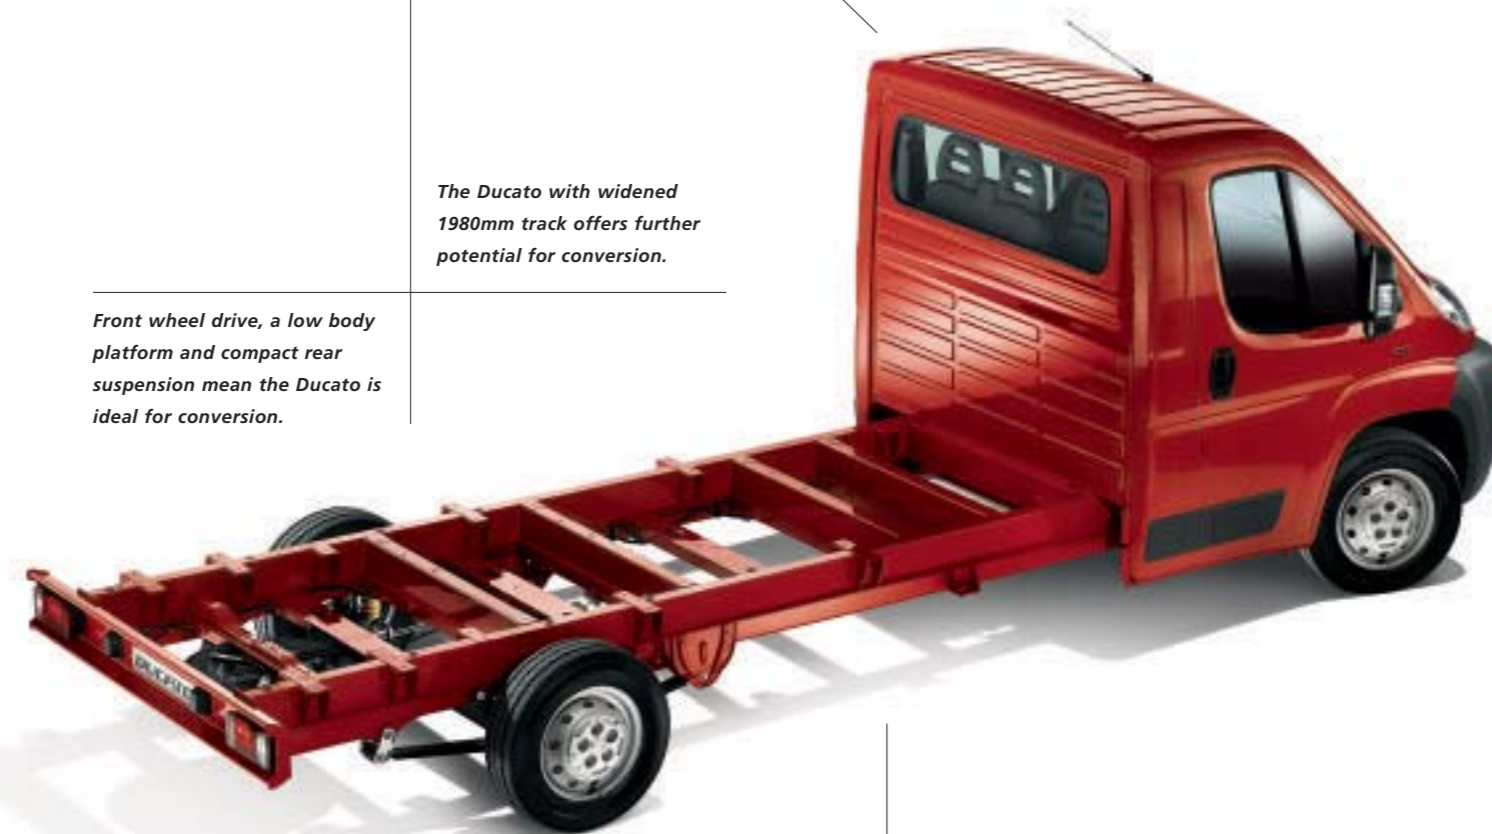

Short wheelbase Ducatos feature 8 hooks for securing cargo in the load space. Long wheelbase models have 12 hooks.

Ducato conversions: the foundations for great work.

The Ducato with widened 1980mm track offers further potential for conversion.

Front wheel drive, a low body platform and compact rear suspension mean the Ducato is ideal for conversion.

The chassis is designed to form the basis of countless conversions.

A choice of powerful engines makes the Ducato particularly suitable for controlled temperature transport.

The Ducato is a natural base for building special vehicles. Its versatility and mechanical layout make conversion easy and economical. This is a vehicle that's ready to adapt exactly to your demands. For ultimate adaptability, the Ducato is available as a van, a single or twin-cab and a platform chassis-cab. In chassis-cab versions you have a choice of three wheelbases and four lengths, plus there is always the Ducato Maxi for the largest, heaviest loads. The possibilities are almost limitless. From camper van to mobile shop, aluminium box body or refrigeration – even a tipper – the Ducato gives you tough, versatile foundations for work, whatever your business needs.

Total Gross Vehicle Weight (GVW) up to
4000 kg

First class seats for nine.

For comfort, safety, style and efficient practicality, the Ducato provides a first class solution – for up to nine passengers.

When you need to move people and loads together, the Ducato has the answer – the Combi. Extremely versatile, the Ducato Combi easily accommodates between five and nine passengers, but at the same time offers a load capacity of between 1.8 and 10m³.

The Ducato Combi offers between 6 and 9 comfortable seats and a high capacity load area.

MULTIJET
TECHNOLOGY

The new balance of power.

It seems like a contradiction, but the Ducato's engine range now offers more power, better performance and lower fuel consumption. It's simply the result of advanced Fiat engineering. There are three new 16 valve Multijet Common Rail engines, with electronic high pressure injection. Power ranges from the 100 bhp 2.2 litre to the 120 bhp 2.3 litre, up to the 157 bhp 3.0 litre Power unit. The torque figures reveal the real potential, with the 3.0 litre Power engine delivering peak torque of 400 Nm from 1700 – 2500 rpm. In other words, engine flexibility is superb, response is instant and refinement exceptional, for real long distance driving pleasure. The Ducato has always been known for low fuel consumption, and this has been further improved in the new range, thanks to advanced technologies tested over thousands of hours and millions of miles in all conditions. Mechanical and technical innovations now mean that service intervals are longer than ever. An oil change for example is now only needed every 40,000 kilometres, or 45,000 kilometres for the 2.2 litre.

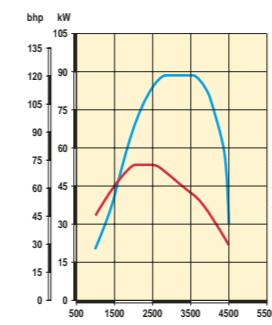

100 MultiJet

Displacement 2198 cc
100 bhp (74 kW) at 2900 rpm
250 Nm (25.5 kgm) at 1500 rpm
Ecology level: Euro 4
16-valve timing system
Common Rail electronically controlled direct injection with fixed geometry turbocharger and intercooler

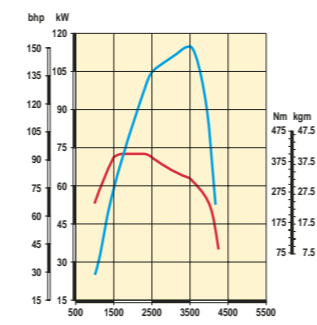

120 MultiJet

Displacement 2287 cc
120 bhp (88 kW) at 3600 rpm
320 Nm (32.6 kgm) at 2000 rpm
Ecology level: Euro 4
16-valve timing system
Common Rail electronically controlled direct injection with fixed geometry turbocharger and intercooler

160 MultiJet Power

Displacement 2999 cc
157 bhp (115.5 kW) at 3500 rpm
400 Nm (40.7 kgm) at 1700 rpm
Ecology level: Euro 4
16-valve timing system
Common Rail electronically controlled direct injection with fixed geometry turbocharger and intercooler

Maintenance programme
40,000 KM
45,000 KM
Depending on engine

Moving you more safely than ever.

Powerful braking is assured, with all-round disc brakes, ventilated at the front.

The Ducato's optional self-levelling suspension ensures constant stability, even if loads aren't loaded properly within the cargo area.

The optional ultrasound parking sensors are activated when reverse gear is engaged, and emit an intermittent sound signal to warn the driver of approaching obstacles.

The driver airbag with dual stage deployment comes as standard. A 120-litre passenger airbag, and two drop-down window bags housed in the panels above the doors are available as options.

Seats have three-point safety belts featuring pretensioners and load limiters.

A key feature is the high-energy absorbing structure at the front of the frame. The front bumper is constructed from three separate sections to reduce repair costs after a minor crash.

20,000 hours of structural calculations, 120 crash tests and hundreds of tests on components and sub-systems have taken the already impressive safety levels of the Ducato to a new level. Designed to absorb impacts with maximum effectiveness, the Ducato's structure is extremely strong, with programmed deformable zones and an immensely rigid passenger compartment.

All seats – with the exception of rear centre seats in twin-cab models – are fitted with three-point safety belts that feature pre-tensioners and load limiters, for complete passenger safety and comfort.

A dual-stage driver's airbag comes as standard, and a 120 litre passenger airbag, side bags and window bags for 360 degree protection, are all available as options.

The Ducato also leads its class in preventative safety. Twin circuit all-round disc brakes have **ABS** and **EBD**, plus, an **ESP** system is also available as an option. This prevents skidding in critical situations such as evasive manoeuvres and features **Hill-holder**, **HBA** and **LAC** systems. The latter monitors load conditions on the move, calibrating and optimising the **ABS**, **ASR** and **ESP**.
